

Admixture Dispenser Operation

Recommended Maintenance Best Practices

Daily

- Observe Tote Level to determine if tote will need to be switched during production
- Note PSI on regulator is at prescribed level
- Manual Calibration at bypass – ounces to counts on totalizer
- Check mixer connections and ports are free of leaks and clear of debris/buildup
- Check bypass/other ball valves are in correct position

Weekly

- General Condition of Dispenser
- Check admixture dispensing lines and dispenser for any signs of leakage
- Check air lines for leaks
- Clean tote/tank filter assembly

Monthly

- Inspect Mixer Fittings for condition and nut driver on hose clamps
- Check Valve – general condition and spring compression
- Clean debris from top and inside dispenser
- Inventory check (totes and tanks) – order product as deemed necessary

Quarterly

- Flush system from tote/tank to mixer with water
- Interior of cabinet – remove excessive dust on components
